/convert_passive: Change active voice to passive voice.
/remove_redundancy: Delete unnecessary repetitions.
/make_concise: Cut fluff to make every word count.
/make_descriptive: Add vivid sensory details.
/summarize_text: Give a brief summary of the input.

2. Coding & Development

/debug_code: Find and fix bugs in the provided code.
/explain_code: Explain what the code does line-by-line.
/optimize_code: Improve performance and efficiency.
/refactor_code: Restructure code without changing functionality.
/write_python: Write Python code for the given task.
/write_js: Write JavaScript code for the given task.
/write_html: Generate HTML markup.
/write_css: Generate CSS styling.
/write_sql: Write SQL queries.
/write_regex: Create regular expressions for pattern matching.
/generate_test: Write unit tests for this function.
/write_docstring: Generate documentation comments.

ladd_comments : Add explanatory comments throughout the code.
. /calc_complexity . Determine Big-0 time
space complexity
·/choose_struct: Recommend the best data structure.
·/design_api : Design a RESTful API endpoint.
·/parse_json : Show how to parse this JSON data.
./handle_errors . Add robust error handling
·lasync_await: Convert synchronous code to asvnchronous
·/write_git_commit:Generate a descriptive commit message

·/write_git_rebase : Provide rebase instructions.
·/write_dockerfile : Generate a Dockerfile confiquration.
·/ci_cd_pipeline :Outline a CI/CD pipeline setup.

/write_pseudocode : Write logical pseudocode first.
·Ireview_code : Perform a thorough code review.
